About the Topic

NHS Property Services Ltd.

- NHS Property Services (NHS PS) was established in 2012 out of 162 NHS trusts and strategic health authorities.
- They presently operate 3,500 buildings with a value of over £3B
- Biggest NHS Real-Estate owner/operator of the UK
- Challenges:
 - Underspending on capital expenditure
 - Lack of Maintenance

About NHS Property Services

NHS Property Services manages, maintains and improves the NHS properties and facilities within our portfolio, working in partnership with NHS organisations to create efficient, sustainable and modern healthcare and working environments.

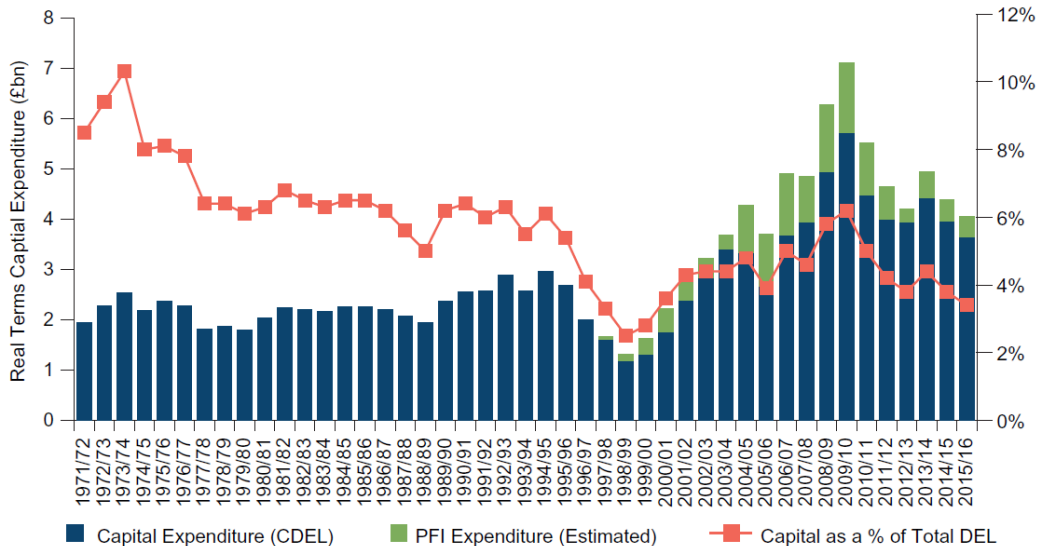

Biggest Challenge NHS Estate had for decades?

- The latest published figures suggest that the backlog on maintenance has risen by over 9% between 2014/15 and 2015/16 to around £5bn, with £1.5bn of this in London.
- The age of buildings isn't a problem, as some older buildings have been upgraded to meet modern standards of care, it is still too often the case that the NHS is operating in inadequate facilities.

Business (IT) Transformation Programme

"NHS Property Services has invested in securing state-of-the-art technology to provide evidence-based technical compliance."

Martin Steele

Chief Operating Officer
NHS Property Services

Major objectives:

Improved control over portfolio of projects – centralised, multi level reporting.

Drive greater consistency and efficiencies in delivering projects – expand capacity

Build our data library and BI capability – benchmarking etc

Implementation of a Construction Management System

Key system requirements:

Ease of use – input and reporting

Potential for integration with other business systems

Depth of functionality (future capability)

Challenges during the build and launch

Process definition

- Project processes - Several workshops were needed to narrow down the process and workflows to implement into the system.

Technology change overload

- Extensive technology change in the company - adoption of the system slow
- Delay of ERP software launch, impacted all following implementations & temporary staff leaving

Integration delayed

- Due to challenges with the implementation of the ERP software the integration between the 3 systems was delayed. Some efficiencies haven't been realised yet.

Major Benefits since implementation

Improved transparency

- All NHS PS staff and external consultants working from 1 system
- Centralised data - No longer fragmented sources
- Exception reporting

Consistency in way of working

- Fully defined project process
- Document templates built into the system
- Standardised reporting – multilayered
- Workflow (approvals) process

Efficiency

- Reduced admin time – less duplication of effort
- Helped us increase from £50m yr capital spend (2016), to £95m yr (2019)

- Takes time and resource to develop. Scope, build & implement
- Get the brief and tender analysis right - Construction led
- Beware trying to do too much at once – other systems & change
- Potential to phase the launch – including functionality
- Training is crucial – consider skill levels & different methods
- End-User involvement (People don't like change, involvement upfront and during implementation makes adoption easier).
